

Milipol 2019: Ouvry laureate of the Milipol Innovation Award in the category « Protection for first-responders »

The Milipol 2019 show awarded the Innovation Award to OUVRY company in the "Protection of first-responders" category for its CBRN extraction bag designed to safely transporting a contaminated victim in life threatening emergency during a chemical crisis.

OUVRY designed this extraction bag to transport victims without contaminating neither the medical personnel nor the carrier of transport (ambulances, helicopters...), while allowing the realization of emergency medical gestures. It helps reduce the level of liquid and vapour contamination of the victim by incorporating two technologies: an active carbon microbeads filter media that adsorbs chemical vapours, and the DECPOL® technology material that absorbs and destroys liquid contaminants.

Its simple design makes it possible to extract the victim from the contaminated area and to stabilize his constants. For more complex monitoring or long-distance transport, OUVRY has also designed a CBRN isolation stretcher.

A University degree from the Val-de-Grâce in 2019

Carole Dougnac, research and development engineer, product manager at Ouvry, wrote a thesis on "development and evaluation of an extraction bag for chemically contaminated victim" as part of a University Diploma in Science and Technology - public health and social sciences - health risks NRBC - chemistry module, of Val-de-Grâce School, in partnership with Paris-Sorbonne University.

About Ouvry

A Lyon-based SME created in 2003, Ouvry specializes in the creation, engineering, production and maintenance of personal and respiratory protection and CBRN decontamination systems. It offers innovative products for all intervention operators: soldiers or gendarmes, firefighters or rescue operators, first-responders of the armed forces, public or civil security forces, health, industry, infrastructure and public transport sites.

Ouvry opens up to the agricultural and chemical industries market by offering protective clothing adapted to the constraints of agricultural activities and industrial pollution control activities, which protect against pesticides products as well as a broad spectrum chemical and biological products.

Ouvry designs and manufactures its products in France: 22,000 NRBC FELIN® equipment, 15,000 equipment for Civil Safety and Health, and more than 4,000 OC50® masks manufactured in Lyon, sold in France and internationally.

Ouvry presents all the industrial architecture of a textile company with an international team. Having set up its headquarters and key functions close to some of its workshops in Lyon, Ouvry affirms its commitment to industrial values of innovation, quality, technicality and professionalism.
